Amendments to the Claims

Please amend the claims as indicated below.

1-12 (canceled)

13. (currently amended) A communications system for communication over a data network

comprising:

a data processing apparatus running a browser; and

an automation device in communication with the data processing apparatus over the data

network, the automation device comprising:

a memory arranged in the automation device and storing communications data,

the communications data comprising:

operating dialogs for the operation of the automation device and for

communication with the browser in the data processing apparatus, and

device information for service and support of the automation device over

the data network;

whereby the stored communications data and device information are transmitted from the

automation device to the data processing apparatus over the data network by way of a standard

protocol.

14. (previously presented) The communications system according to claim 13, wherein

the operating dialogs comprise Java objects.

Docket No: 1140668-0005 Page 4 of 8

15. (previously presented) The communications system according to claim 13, wherein the

communications data stored in the memory comprise data in compressed form.

16. (previously presented) The communications system according to claim 14, wherein the

communications data stored in memory comprise data in compressed form.

17. (previously presented) The communications system according to claim 13, wherein the

data network comprises an Internet.

18. (previously presented) The communications system according to claim 13, wherein the

browser comprises an Internet browser.

19. (previously presented) The communications system according to claim 13, wherein the

communications data stored in the memory are transferred from the automation device to the

data processing apparatus for operating the automation device.

20. (previously presented) The communications system according to claim 13, wherein the

communications data transferred from the automation device to the data processing apparatus are

executed in the browser and are displayed by the data processing apparatus.

21. (previously presented) The communications system according to claim 13, further

comprising at least a second data processing apparatus having a browser and in communication

with the automation device over the data network, and wherein the stored communications data

and device information are transmitted from the automation device to the second data processor

over the data network by way of a standard protocol.

22. (previously presented) The communications system according to claim 21, wherein the

second data processing apparatus is in communication with the automation device via the

Internet.

23. (currently amended) A method for communications over a data network between a data

processing apparatus having a browser and an automation device, the method comprising the

steps of:

storing, in a memory arranged in the automation device, communications data for

communicating with the browser, the communications data comprising

operating dialogs for the operation of the automation device and communications

with the browser in the data processing apparatus, and

device information for service and support of the automation device over the data

network; and

transmitting the stored communications data and device information from the automation

device to the data processor over the data network by way of a standard protocol.

24. (previously presented) The method according to claim 23, wherein the communications

data comprises Java objects.

25. (previously presented) The method according to claim 23, wherein the communications

data stored in the memory comprises data in compressed form.

26. (previously presented) The method according to claim 23, wherein the browser

comprises an Internet browser.

27. (previously presented) The method according to claim 23, wherein the communications

data transferred from the automation device to the data processing apparatus arc executed in the

browser and are displayed by the data processing apparatus.

28. (currently amended) An automation device for communications over a data network with

at least one data processing apparatus having a browser, the automation device comprising:

a memory arranged in the automation device and storing communications data

comprising:

operating dialogs for the operation of the automation device and communication

with the browser in the data processing apparatus, and

device information for service and support of the automation device over the data

network,

whereby the stored communications data and device information are transmitted from the

automation device to the data processing apparatus over the data network by way of a standard

protocol.

29. (previously presented) The automation device according to claim 28, wherein the

communications data comprises Java objects.

30. (previously presented) The automation device according to claim 28, wherein the

communications data comprises data stored in the memory in compressed form.

31. (previously presented). The automation device according to claim 28, wherein the data

network comprises an Internet.

32. (previously presented) The automation device according to claim 28, wherein the at least

one data processing apparatus comprises a plurality of apparatuses and the stored

communications data and device information are transmitted from the automation device to the

plurality of data processing apparatuses over the data network.
